Wireless System

MR122

VHF Dual Channel True Diversity Receiver Handheld wireless microphone or beltpack transmitter with lavalier microphone

Features

- A professional 19" EIA standard metal casing can effectively shield the interference. the exquisite front panel has color display windows containing separate channel RF & audio signal indicators and volume control. The retractable antennas are installed on the rear panel. With the built-in intelligent dual-slot battery charger eliminates the need for buying batteries.
- High I.P. amplifier and high Q band-pass filter circuitry eliminate intermodulation distortion and spurious interference during multi-channel operation. This result in a high S/N ration over 80 dB at a weak input signal 12 dB μ V, which presents higher sensitivity than that of any other made systems.
- Adopting the most advanced diversity receiving circuitry, completely eliminates signal drop-out, instability, and results in extremely low noise detected in long distance receiving.
- Exclusively developed squelch controlled circuitry of PILOTNETM, prevents unwanted signal interference and sudden bursting noise at standby state of the receiver.
- The PCB assembled by sophisticated SMT automatic equipment possess durable and stable quality. Its superbly designed RF shielding prvents spurious emission and signal interference.
- Utilizing a safe AC power adapter eliminates HUM noise, leakage and electric shock dangers of receivers. Its anti-shock noise circuitry perfectly eliminates power on-off shock noise of receivers.
- Mipro has invested millions of US dollars in world-famous precision testing instruments. All lines of products are aligned and tested rigorously to ensure that the product quality and performance meet characteristics specific. QC report for each product is recorded to be rendered for reference if required.
